

IFRIT NETWORK

BLACKPAPER V1.0

ABOUT IFRIT NETWORK

Ifrit Network is a decentralized project that focuses on developing the latest technologies related to DeFi and crypto. By implementing AI technology, we are making a new breakthrough in developing digital platforms that can automate everything more efficiently.

Apart from that, we are taking NFT to the next level. By implementing NFT as a key on our staking platform, where NFT has a role to manage the APY. By bringing this, we are trying to bring fresh air to restore the glory of the NFT. Not only as a staking key, the Ifrit NFT will also have a role as a tool used to mine Ifrit tokens on our platform.

Ifrit as a door to explore the world of blockchain further.

Not only DeFi, we also focus on research and development related to blockchain, where we provide a web3 forum platform to discuss technical matters regarding building a blockchain.

IFRIT DEX

Ifrit DEX is the first product from Ifrit Network. We use 1inch API as a bridge to connect our application with the blockchain.

Currently, Ifrit DEX can be used as a decentralized crypto exchange platform on 2 blockchains (BSC and ETH)

UPCOMING APP

Ifrit Network will launch another app to filling our ecosystem. Another app that will launch :

1. Ifrit Network NFT Staking Platform
2. Ifrit Network Web3 Forum
3. Ifrit Network Pool Feature
4. Ifrit Network Mining Game
5. Ifrit Network Bridge
6. Ifrit Network Blockchain
